(for Europe)

SPECIFICATIONS

■ SPECIFICATIONS

Power Source:	From telephone line/3 AA(LR6, R6, UM-3) batteries
Memory Capacity:	50 Caller ID memory, 50 Directory memory.
Dialing Mode:	Tone(DTMF)
Redial:	The unit redials the last 20 dialed number
Speaker Unit:	Handset; 3 cm ($1\frac{13}{16}$) PM dynamic type 150Ω
Microphone:	Electret condenser microphone
Input Jack:	Telephone Line
Operating Enviroment:	5 °C - 40°C
Dimensions:	$3\frac{9}{32}$ " \times $5\frac{3}{4}$ " \times $7\frac{7}{8}$ " (83 \times 146 \times 200 mm)
Weight:	1.15 lbs. (520g)

Design and specifications are subject to change without notice.

WARNING

This service information is designed for experienced repair technicians only and is not designed for use by the general public. It does not contain warnings or cautions to advise non-technical individuals of potential dangers in attempting to service a product. Products powered by electricity should be serviced or repaired only by experienced professional technicians. Any attempt to service or repair the product or products dealt with in this service information by anyone else could result in serious injury or death.

When you note the serial number, write down all 11 digits. The serial number may be found on the bottom of the unit.

FOR SERVICE TECHNICIANS

ICs and LSIs are vulnerable to static electricity.

When repairing, the following precautions will help prevent recurring malfunctions.

1. Cover plastic parts boxes with aluminum foil.
2. Ground the soldering irons.
3. Use a conductive mat on worktable.
4. Do not grasp IC or LSI pins with bare fingers.

CAUTION

Danger of explosion if battery is incorrectly replaced.

Replace only with the same or equivalent type recommended by the manufacturer.

Dispose of used batteries according to the manufacturer's Instructions.

Panasonic

1. BATTERY

If “” flashes, the battery power is low. Install new batteries as soon as possible.

- 1 Disconnect the telephone line cord from the unit.
- 2 Press down in the direction of the arrow and remove the cover (①).
- 3 Replace the batteries with new ones using correct polarity (+, -) (②), and close the cover.
- 4 Connect the telephone line cord to the unit.

- After the battery replacement, the information stored in the Caller List and the Redial List will be cleared. Store the desired item in the Speed Dial List.
- The time will be shown as “12:00^{AM} 1/1” or “0:00 1/1” after replacing the batteries, readjust the time.

Battery Precautions:

The batteries should be used correctly, otherwise the unit may be damaged by battery leakage.

- Do not mix different types of batteries.
- Do not charge, short-circuit, disassemble, heat or dispose of in fire.
- Remove all the batteries when replacing.

Note:

- If you do not install the batteries or if the battery power is low, the time will be shown as “12:00^{AM} 1/1” or “0:00 1/1”. Readjust the time and date after the battery replacement.
- Replace all the batteries every six months if using Alkaline batteries, or misoperation may occur. (When you use Manganese batteries, replace all of them every three months.)
- Do not use nickel-cadmium batteries.

2. LOCATION OF CONTROLS

How to use the Navigator key

This key has four active areas that are indicated by arrows.

- Pressing the up and down arrows allows you to enter the Caller List and select the function menu, the Caller List and the Speed Dial List. The up and down arrows are also used to adjust the receiver volume.
- Pressing the right and left arrows allows you to enter the Speed Dial List and move the cursor when entering Speed Dial items.

Throughout these Service Manual, the navigator key is indicated by the arrows **V**, **^**, **◀** or **▶**.

3. DISPLAY

1234567890123456
 88:88^{AM}88/88 #88x8

(This display shows all of the possible configurations.)

10 NEW CALLS
 12:34^{AM}24/11

While the unit is not in use, the display shows the current time and date, and the number of new calls.

NO ITEMS STORED
 12:00^{AM}1/1

If the display continuously shows “12:00^{AM} 1/1” or “0:00 1/1”, the clock needs adjustment.

01-06-35
 12:34^{AM}24/11

During a conversation, the display shows the length of the call (Ex. 1 hour, 6 minutes and 35 seconds).

1114447777
 11:50^{AM}24/11 x3

This is a display from the Caller List. The display shows:

- the caller's number,
- the time and date of the last call (Ex. Nov. 24, 11:50 AM),
- the caller's information is new and has not been viewed (“NEW” is displayed), and
- the number of times called (Ex. 3 times).

: The dial lock mode is set.

: The unit enters in the Speed Dial List.

: was pressed while the handset is on the cradle.

: This display flashes, when the battery power is low. Replace the batteries.

P : was pressed while dialing or storing phone numbers

F : was pressed while storing phone numbers.

4. SETTINGS

4.1. Connecting the Handset/Telephone Line Cord

After connection, lift the handset to check for a dial tone.

- Use only a **Panasonic Handset for KX-TSC10EXB/C/W.**
- Use only a **telephone line cord included in the unit.**
- If your unit is connected to a **PBX which does not support Caller ID services**, you cannot access those services.

4.2. Dial Lock

You can prevent others from making a call to any number except dialing by the Speed Dial List (#01, #02 and #03). Once you locked the dialing buttons, even emergency numbers cannot be dialed. Only incoming calls are accepted until the dial lock is canceled.

Before using the Dial Lock or Call Restriction feature, we recommend storing emergency numbers in the memory of the Speed Dial List (#01, #02 or #03). Even if the dialing buttons are locked or the stored numbers are restricted, the numbers stored in these buttons can be dialed.

To set the dial lock

1 Press **[*]**.

- “**Q**” flashes on the display.

ENTER PASSWORD

2 Enter the password.

: *****

3 Press **[OK]**.

- “**Q**” displays.
- If the wrong password was entered, “ERROR” will be displayed, then “— — —” will be displayed. Enter the correct password.

If the dial buttons are pressed after lifting the handset, “DIAL LOCKED” will be displayed.

You can use the following features while the dialing buttons are locked.

- Dialing a number you programmed into the memory of the Speed Dial List (#01, #02 and #03)
- Selecting the ringer volume
- Adjusting the handset volumes
- Answering the second call by pressing **[R]**
- Programming [except storing/erasing Speed Dial List (#01, #02 and #03)]
- Finding an item in the following lists
 - Caller list
 - Speed dial list
 - Redial list

To cancel the dial lock

Follow above steps 1 through 3. In step 3, “**Q**” will go out.

4.3. How to Release the Establishment of Dial Lock

**After this procedure, you will be able to establish a new password.
How to release the establishment of dial lock.**

1 Press .

SAVE SPEED DIAL?
⌂

2 Scroll to "CHANGE PASSWORD?" by pressing or .

CHANGE PASSWORD?

3 Press .

CURRENT PASSWORD

4 Enter "726276642" for initialling of password.

: ****

5 Press .
• If the wrong password was entered at step 4, "ERROR" will be displayed, then "----" will be displayed.

NEW PASSWORD

6 Enter a new password 4 digits code by dial key pad (ex. "1234").

: 1 2 3 4

If you want to set the password for "DIAL LOCK" to "1 1 1 1" (factory set), you should enter "1 1 1 1".

7 Press .
• The display will return to step 2.
To exit the programming mode, press or wait for 60 seconds .

STORED

8 To cancel the Dial Lock, follow **To Cancel the Dial Lock**.

4.4. Call Restriction

You can prevent the unit from dialing phone numbers beginning with specified digit(s) (1 digit or 2 digits). Phone numbers with the restricted leading digits cannot be dialed out.

To set the call restriction

Make sure that the handset is on the cradle.

- 1 Press **[→]**.
- 2 Scroll to "CALL RESTRICT ?" by pressing **[V]** or **[^]**.
- 3 Press **[OK]**.

If you changed the password "1111" (factory set), the display on the right will be shown. Follow below steps 1 and 2.

 1. Enter the password
 2. Press **[OK]**. Go to step 4.
 - If the wrong password was entered, "ERROR" will be displayed, then "— — —" will be displayed. Enter the correct password.
- 4 Enter the number(s) (1 digit or 2 digits) you want to restrict (**[0]** to **[9]**).
 - If the wrong number was entered, press **[C]** and enter the correct number.
- 5 Press **[OK]**.
 - The display will return to step 2. To exit the programming mode, press **[→]** or wait for 60 seconds.

CALL RESTRICT ?

RESTRICT NO. : --

ENTER PASSWORD

: ****

RESTRICT NO. : -9

STORED

When dialing a phone number with the restricted leading digit(s), "CALL RESTRICTED" is displayed.

To cancel the call restriction

Follow steps 1 through 3. In step 4, press **[C]** to clear the restricted digits, and press **[OK]**.

5. OPERATIONS

5.1. Making Calls

1 Lift the handset.

12:34_{PM}24/11

2 Dial a phone number.

The dialed number is displayed.
After a few seconds, the display will show the length of the call.
If you misdial, hang up and start again from step 1.

1234567890

12:34_{PM}24/11

00-00-00

12:34_{PM}24/11

3 When finished talking, hang up.

To redial the last number dialed

Lift the handset ➔ press .

To redial using the redial list (Memory Redial)

The last 20 phone numbers dialed are stored in the redial list.

1. Press .

The last number dialed and  are displayed.

When the dialed number has been stored in the Speed Dialer List, the name is displayed instead of the number. To see the number, press .

2. Select the desired number by pressing  or .

You can also select through the list by pressing .

To exit the list, press .

3. Lift the handset.

The displayed phone number is dialed.

To erase an item, repeat steps 1 and 2, and press .

If NO ITEMS STORED is displayed, the list is empty.

To adjust the handset volume (4 levels) while talking

To increase, press .

To decrease, press .

Ex. Handset volume level: 2

□□

12:34_{PM}24/11

The display shows the volume level for a few seconds.

5.2. Answering Calls

When a call is received, the unit rings, "INCOMING CALL" is displayed. If you subscribe to a Caller ID service, the calling party's information will be displayed when the unit is ringing (see below).

1 When the unit rings, lift the handset.

2 When finished talking, hang up.

- When the ringer volume is set to OFF, the unit will not ring.

5.3. FLASH Button

Pressing **[R]** allows you to use special features of your host PBX such as transferring an extension call or accessing special telephone services (optional) such as call waiting.

Selecting the flash time

The flash time depends on your telephone exchange or host PBX. You can select the following flash times: "80, 90, 100, 110, 200, 250, 300, 400, 600, 700 ms (milliseconds)". Your phone comes from the factory set to "100 ms".

Make sure that the handset is on the cradle.

1 Press **[→]**.

2 Scroll to "SET FLASH TIME ?" by pressing **[↓]** or **[↑]**.

SET FLASH TIME ?

3 Press **[OK]**.

FLASH TIME 100MS

4 Select the desired time by pressing **[↓]** or **[↑]**.

5 Press **[OK]**.

STORED

- The display will return to step 2. To exit the programming mode, press **[→]** or wait for 60 seconds.

- You can exit the programming mode any time by pressing **[→]**.
- If the unit is connected via a PBX, PBX functions (transferring a call, etc.) might not work correctly. Consult your PBX supplier for the correct setting.

Note: for Service ; When there is no battery, a Flash function may not operate appropriately.

7. TROUBLESHOOTING GUIDE

Make sure batteries are installed for proper operation before troubleshooting.

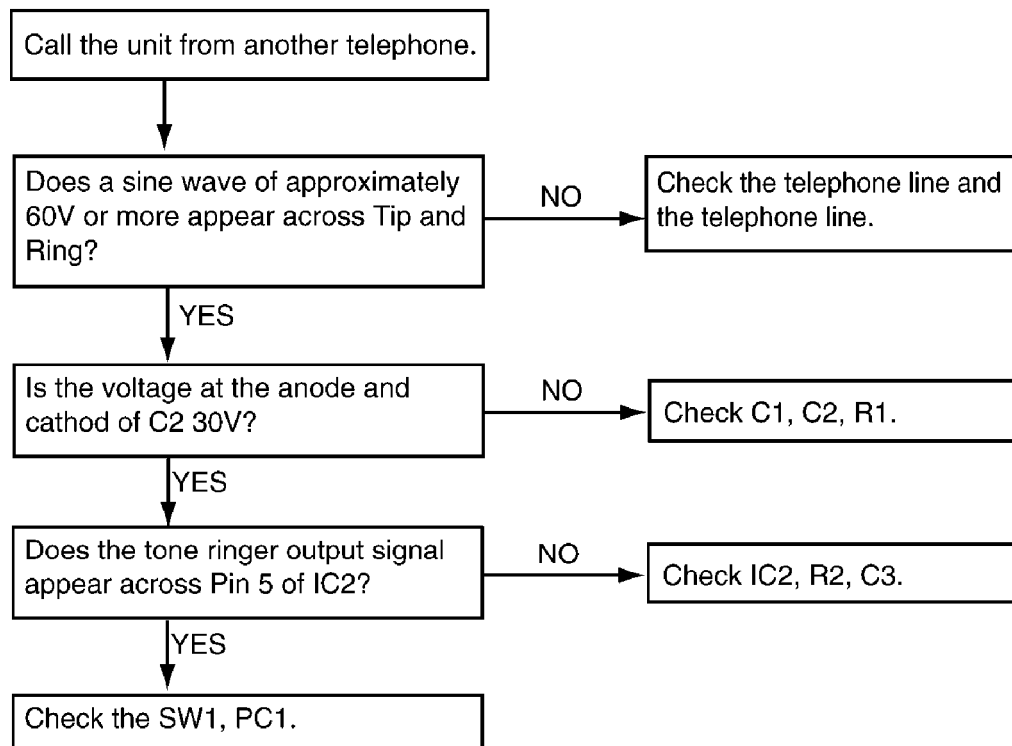

7.1. Service Hints

SYMPTOM	CURE
Dead.	Check IC801, X801, X802.
Can't hear the voice from handset.	Check Q401, Q403, Q404.
No voice transmit.	Check Q422, Q108.
Can't tone dial.	Check IC801(94), R819, R482~R484, R553, C483.
No rings.	Check IC1 and PC1.
Can't speak with the handset.	Check Handset jack.
Can't change the volume for Handset.	Check IC801, Q406~Q408, R407~R409.
No volume handset.	Check Q108, Q422.
Caller ID Function doesn't work.	Check C551, C552, R551, R552, D551~D554, IC801.
Caller ID Function doesn't work. (DTMF)	Check around IC501, Q501, Q502.

7.2. Tone Dialing Problems (handset)

7.3. No Ringing Sound When Ring Signal is Input

8. BLOCK DIAGRAM

9. CIRCUIT OPERATION

9.1. Bell Detector Circuit

When the bell signal is input between T/R, the signal are outputted at the speaker via the following path: Tel line → R1/C1 → Pin 8 of IC2 → Pin 5 of IC2 → PC1 → SW1 → Ringer

9.2. Line Interface

In talk status, SW101 become ON and Q104 base changes to high level, causing Q104, Q102 to turn on and resulting in a line loop. The loop current flows from D101(+) → Q102 → Q108 → R114 → D103 in that order.

9.3. MODULE BLOCK DIAGRAM

9.3.1. Telephone Line Interface

9.3.1.1. Circuit operation

- On hook

Q102 is open, Q102 is connected as to cut DC loop current and cut the voice signal.

- Off hook

Q102 turns on thus providing an off-hook condition (active DC

current flow through the circuit) and the following signal flow id for the DC loop current. T → D101 → Q102 → Q108 → R114 → D103 → D101 → R

- The receiving signal flows:

TEL line → Q102 → C405 → C401 → R401 → Q401 → Q403 → Q404 → H/S SP

- The transmission signal flows

Mic → Q422 → R428 → C427 → Q108 → Tel Line

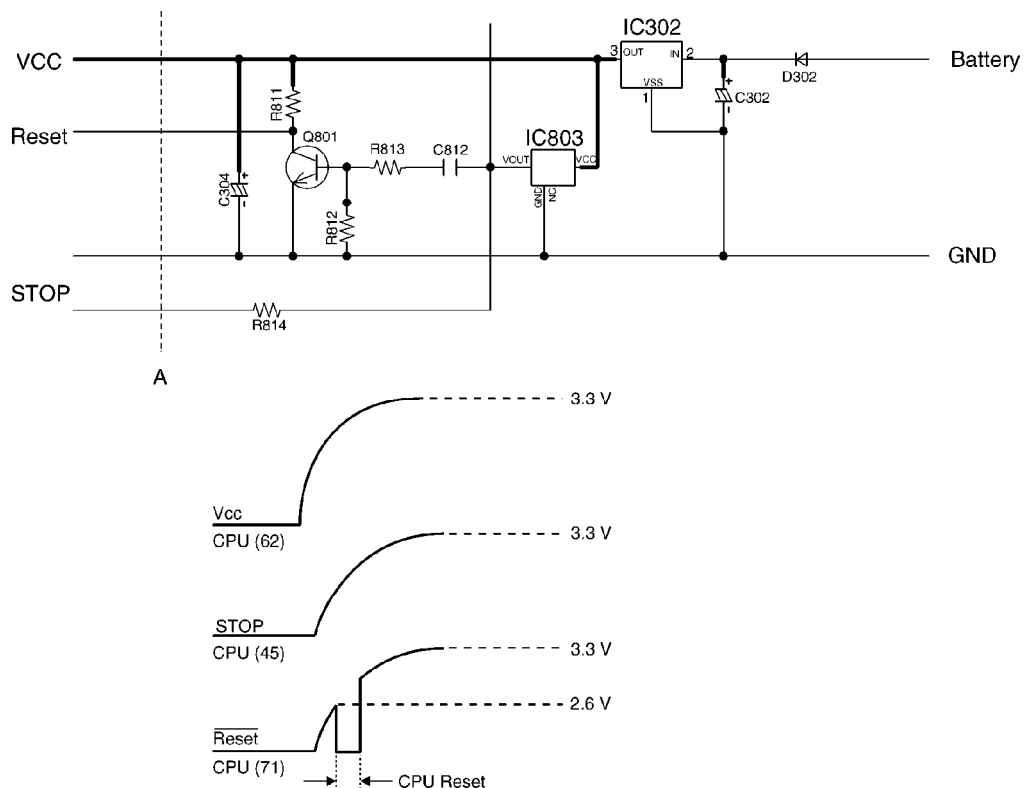

9.3.2. Inializing Circuit

9.3.2.1. Function

This circuit is used for to initialize the microcomputer when it incorporates batteries.

9.3.2.2. Circuit operation

When the batteries is inserted into the unit, then the voltage is regulated by IC302 and power is supplied to the CPU. The set can operate beyond point A in the circuit voltage diagram.

9.4. Caller ID Detect Circuit

9.4.1. Function (FSK signal)

The caller ID is a changeable ID which the user of a telephone circuit obtains by entering a contract with the telephone company to utilize a caller ID service. For this reason, the operation

of this circuit assumes that a caller ID service contract has been entered for the circuit being used. The data for the caller ID from the telephone exchange is sent during the interval between the first and second rings of the bell signal. The data from the telephone exchange is a modem signal which is modulated in an FSK (Frequency Shift Keying) format. Data "0" is a 1200 Hz sine wave, and data 1 a 2200 Hz sine wave. There are two types of the message format which can be received: i.e. the single message format and plural message format. The plural message format allows to transmit the name and data code information in addition to the time and telephone number data.

9.4.2. Circuit operation

Caller ID / Caller ID signal is sent through the circuit via the following path: / TEL Line → C551, C552 → R551, R552 → Pin87,88 of IC801

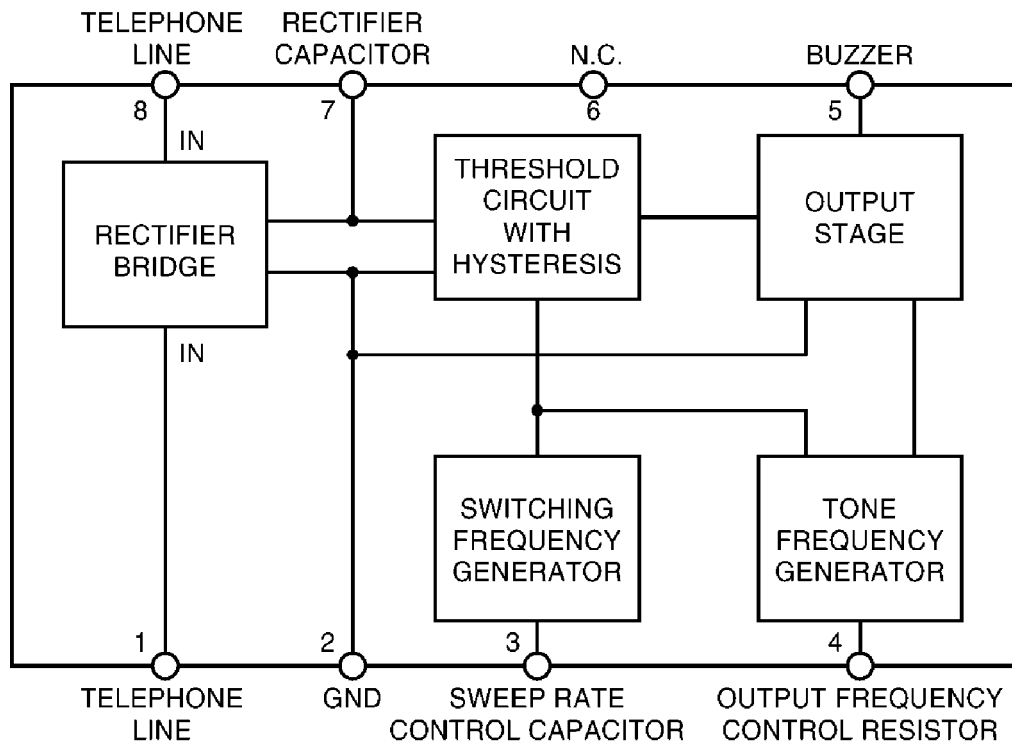

10. BLOCK DIAGRAM

10.3. RINGER IC (IC2)

10.4. EEPROM (IC802)

1. SCK

SCK terminal is input terminal of Serial Clock to control transmit and receipt between Master and Slave.

2. SDA

SDA terminal is input terminal, to forward the address and the mutual data between Master Device and Slave Device the mutual. This terminal needs the pull-up resistance external because output circuit of SDA uses Open Drain.

3. A0, A1, A2

A0, A1, and A2 terminal is not used.

4. WP

WP terminal controls writing action. It is possible to do only reading action when high level input and it is possible to do reading and writing action when low level input.

11. HOW TO REPLACE FLAT PACKAGE IC

11.1. Preparation

- SOLDER

Sparkle Solder 115A-1, 115B-1 or Almit Solder KR-19, KR-19RMA

- Soldering iron

Recommended power consumption will be between 30 W to 40 W.

Temperature of Copper Rod $662 \pm 50^{\circ}\text{F}$ ($350 \pm 10^{\circ}\text{C}$)

(An expert may handle between 60 W to 80 W iron, but beginner might damage foil by overheating.)

- Flux

HI115 Specific gravity 0.863.

(Original flux will be replaced daily.)

11.2. Procedure

- 1. Tack the flat pack IC to the PCB by temporarily soldering two diagonally opposite pins in the correct positions on the PCB.**

● - - - - - Temporary soldering point.

Be certain each pin is located over the correct pad on the PCB.

2. Apply flux for all pins of FLAT PACKAGE IC.

3. Being careful to not unsolder the tack points, slide the soldering iron along the tips of the pins while feeding enough solder to the tip so that it flows under the pins as they are heated.

11.3. Modification Procedure of Bridge

- 1. Add a small amount of solder to the bridged pins.**
- 2. With a hot iron, use a sweeping motion along the flat part of the pin to draw the solder from between the adjacent pads.**

15. REPLACEMENT PARTS LIST

1. RTL (Retention Time Limited)

The marking (RTL) indicates that the Retention Time is limited for this item.

After the discontinuation of this assembly in production, the item will continue to be available for a specific period of time. The retention period of availability is dependant on the type of assembly, and in accordance with the laws governing parts and product retention.

After the end of this period, the assembly will no longer be available.

2. Important safety notice

Components identified by the  mark indicates special characteristics important for safety. When replacing any of these components, only use specified manufacture's parts.

3. The S mark means the part is one of some identical parts. For that reason, it may be different from the installed part.

4. ISO code (example: ABS-94HB) of the remarks column shows quality of the material and a flame resisting grade about plastics.

5. RESISTORS & CAPACITORS

Unless otherwise specified;

All resistors are in ohms (Ω) K=1000 Ω , M=1000k Ω

All capacitors are in MICRO FARADS (μ F) P= μ μ F

*Type & Wattage of Resistor

16. FOR SCHEMATIC DIAGRAM

1. SW1: Hook switch.
2. SW2: Ringer selector.
3. DC voltage measurements are taken with electronic voltmeter from negative voltage line.
4. (Add 40 mA to telephone line from the loop simulator.)
5. Off-hook condition
6. No Mack: Handset Mode
7. This schematic diagram may be modified at any time with the development of new technology.
8. The shaded area on this schematic diagram incorporates special features important for protection from fire and electrical shock hazards.
9. When servicing, it is essential that only manufacture's specified parts be used for the critical components in the shaded areas of the schematic.
